On 2/16/82, pt was adm w/a dx of Left Hemiplegia-one wk post-partum. Pts history includes hypertension. Pt was not doing well at the time of admission. Angiogram was performed on 2/18/82, revealing complete occlusion of the R internal carotid artery with marked shift across the midline. CT scan & EEG were performed reporting to be normal. During Hospital stay pts consciousness deteriorated & neuro consult was obtained. Pt then went semiconatose. Pt intubated & placed on supportive respirator & placed under bariturate coma. Pt was unresponsive & expired 2/22/82. Autospny was performed revealing R middle arter thrombembolis, edemia of the R hemisphere with shift w/pulmonary embolis. Now atty has been retained.
